

Amendments To The Specification:

Please replace the section of the Specification, beginning with the 1st line on page 4 to the 4th line on page 4 of the Specification, with the following section:

and has a thickness of $0.1 < d < 1.0$ mm and is designed in such a way as to produce an air flow resistance of 500 Nsm^{-3} , $< R1 < 2500 \text{ sm}^{-3}$, especially of ~~900 Nsm^{-3}~~ $900 \text{ Nsm}^{-3} < R1 < 1900 \text{ Nsm}^{-3}$

Please replace the section of the Specification, beginning with the 1st line on page 6 to the 7th line on page 6 of the Specification, with the following section:

Figure 1 shows a diagram of the construction of a lining according to the invention. This lining has a central support layer 3, which consists of an air-permeable material, preferably an open cell PU foam. In a preferred embodiment, this foam layer 3 has a thickness of approximately 5 mm to 30 mm, especially 20 mm, and has a volume density of 20 kg/m^3 to 60 kg/m^3 . A reinforcement layer 4 and

Please replace the section of the Specification, beginning with the 25th line on page 7 to the 27th line on page 7 of the Specification, with the following section:

Preferred embodiment, a barrier layer of polyester and Cellulose fibres with a weight per unit area of 20 g/m^2 to
